OBJECTIVE

Full-stack software engineer specializing in web application development, third-party API and CRM integrations, and AI-powered product features. Experienced across the full stack — from REST API and webhook design to responsive front-end interfaces — with a track record of developing and deploying production systems.

EXPERIENCE

Aarika Real Estate (Dubai) — CRM Integration (Freelance)

May 2026 – Present

Technologies: LeadRat CRM API, REST APIs, JavaScript / React

- Delivered a CRM integration connecting Aarika Real Estate's off-plan listings page to the LeadRat real-estate CRM, removing the need for the sales team to manually update property inventory.
- Built the data-fetching, response-parsing, and dynamic-rendering layer that kept live project and inventory data accurate on the public-facing site, improving buyer confidence and reducing listing discrepancies.

CASA Real Estate — WhatsApp Business CRM Automation (Freelance)

January 2025 – March 2025

Technologies: WhatsApp Business API, REST, Webhooks, Serverless Functions (AWS Lambda / GCP Cloud Functions)

- Built an end-to-end WhatsApp Business API automation pipeline from the ground up, designing the RESTful request/response layer that powered automated, real-time customer conversations at scale.
- Implemented webhook receivers with signature verification and deployed serverless functions for real-time CRM synchronization and lead routing — cutting response times by 60% and helping the client convert more inbound leads into paying customers.

AI-Powered Social Media Content Automation (Freelance)

February 2024

Technologies: OpenAI GPT API, Python, Twitter/X API, scheduling automation

- Integrated the OpenAI GPT API to automate a client's content-generation workflow at 95% output accuracy, eliminating hours of manual copywriting every week and giving the client a consistent, always-on content pipeline.
- Designed intelligent scheduling logic that timed posts around peak audience activity, driving a 30% increase in tweet visibility and engagement and helping the client grow their online presence without added effort on their end.

Bitget Trading Platform — API Integration Support (Freelance)

February 2024

Technologies: Python, REST APIs, Signature-Based Authentication

- Diagnosed and resolved critical Python API integration failures on the Bitget trading platform that were blocking automated trading operations, restoring 100% functionality and preventing further revenue-impacting downtime.
- Rebuilt the signature-generation logic and overhauled error handling, making the integration more resilient and considerably faster to debug going forward.

mobileLIVE Inc. — Software Developer Intern (Summer Term)

June 2022 – September 2022

Richmond Hill, ON

- Developed responsive web applications using React.js, JavaScript ES7+, and jQuery that sped up page loads and delivered a smoother experience across desktop and mobile, directly improving the product's usability for end users.
- Improved coding efficiency by applying best practices and design patterns, reducing bug rates and helping the team ship scalable, production-ready code.
- Collaborated closely within an agile team, applying modern front-end techniques and clear cross-functional communication to keep project delivery on track.

VOLUNTEER EXPERIENCE + PERSONAL SIDE PROJECTS

Facty — AI Fact-Check Chrome Extension

July 2025 – September 2025

JavaScript · Chrome Extension API · Google Gemini AI · Custom Search API

- Built a Chrome extension for real-time fact-checking that integrated Gemini 2.5 Pro AI and the Google Custom Search API, generating instant verdicts with detailed explanations and source citations to help everyday users cut through misinformation while browsing.
- Developed a responsive popup UI with color-coded verdict displays and secure settings management using the Chrome Storage API, giving users persistent, secure control over their preferences and API keys.

Cover Pro — AI Cover Letter Generator

June 2025 – August 2025

Next.js · TypeScript · React · Tailwind CSS · Supabase · Clerk · Gemini AI · coverpro.netlify.app

- Developed a full-stack web application that used Google Gemini AI to generate personalized, tailored 300–400 word cover letters by analyzing a candidate's resume against a target job description, saving users hours of writing and helping them submit stronger, more targeted applications.
- Implemented secure authentication with Clerk and protected API routes, and built file-upload functionality supporting PDF and DOCX parsing (via Mammoth and pdf-parse) so users could upload resumes in whatever format they already had, removing friction from the onboarding flow.

Cosmoxis — AI Receipt Scanning SaaS

November 2024 – February 2025

Next.js · TypeScript · Supabase · AI/OCR · cosmoxis.com

- Designed and built the full product end-to-end — marketing site, web app, and backend — as a self-directed SaaS venture, launching an AI-powered OCR engine that turns photographed or uploaded receipts into structured financial data in seconds.
- Implemented smart categorization, budget tracking, and CSV/PDF export, and launched tiered subscription plans (Free / Pro / Business) with usage limits, account management, and encrypted storage — establishing the technical and business foundation for a recurring-revenue product.

Shifthive — Ontario (Part-Time Development Support)

April 2022 – March 2024

Technologies: Next.js, React, automated staff-allocation algorithms

- Built a workforce scheduling platform for hospitals using Next.js and React that replaced error-prone manual processes, reducing scheduling time by 70% and cutting overtime costs by 20% — saving hospital clients meaningful labor costs every month through automated staff-allocation algorithms.
- Developed an Excel-to-algorithm import pipeline that parsed and validated spreadsheet data server-side, automating schedule ingestion, eliminating 15 hours/week of manual data entry, improving data accuracy, and reducing onboarding friction for new hospital clients by 50%.
- Designed configurable organizational modules that gave clients full independence to manage their own schedules, cutting support requests by 30% and increasing system reliability by 40% through improved scheduling algorithms.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, Java, Kotlin, SQL, HTML/CSS, JSON

Front-End: React, Next.js, Tailwind CSS, responsive UI development, jQuery

Back-End & APIs: Node.js, Express, Flask, REST API design, Webhooks, Serverless Functions; third-party & CRM integrations (LeadRat, WhatsApp Business API, OpenAI, Gemini)

Data & Cloud: Supabase, Redis, Docker, Google Cloud Platform, GitHub

EDUCATION

University of Toronto

September 2018 – June 2023

Bachelor of Science in Cognitive Science & Physics — Toronto, ON
